One of the Real Live Monarchs
GIBSON

Gibson—A Perfect Midseason Sort

Since the introduction of this wonderful variety we have been watching it very carefully and we can now say, that of all the sorts which we have seen in fruiting it has no equal. It has been tested in all sections of the country and is a proven success wherever tried and our own experience justifies us in saying that without a doubt it will produce twice the berries of any other sort. As a drought resister it is a wonder. Has an exceptionally fine color and bears extra large fine flavored fruit. Perhaps one of the best points of this remarkable variety is that it will hold its size until the very end of the picking season. This we believe is due to the extra large healthy plant which this sort produces, having a very long root system and being almost immune from diseases. Whether you grow strawberries for market or home use we recommend the Gibson and know that you will be more than satisfied with both the quantity and quality of berries, which this extraordinary sort will produce for you.

We sell more of the Gibson than any other one variety and this in itself is the best recommendation that we can give it. In our section here the Bridgman Fruit Growers' Association demand that their growers set this sort and we believe that we have over 500 acres of this berry grown around and near us at present. The plant is perfect flowering and is an exceptionally fine pollenizer, making it a good one to set with other imperfect varieties.

For big profits, set the Gibson. It is a wonderful shipper and will outsell almost any other variety. We recommend it to you, for we want all our friends to get in on this good thing and don't forget to place your order early for not all growers will be able to get them this year.

Price \$7.00 per Thousand

A Perfect Plant—as we grow them.

Our Plants Assure Big Crops

Let us talk this proposition over together in a frank, personal way. You are in the market for berry plants, the best that you can buy; and we are in the business of growing plants. You want first-class goods; and we want customers, who can appreciate our perfectly grown and selected berry plants.

Every Order Receives Our Personal Attention

We wish you could visit us personally and see the way we handle our business, the way we grow our plants, and the extra care we use in making selections for safe shipments. Then you would know how we do business, how you can depend upon us for the very best berry plants. You would then understand what we mean by personal attention, for you would see us select these plants with the same care that you would use yourself.

This Brings Us New Customers Every Year

Each year we have enlarged our acreage; each year we have added new customers, who have become real friends. We want every customer to know that they can place the same confidence in us by dealing through correspondence as if they came right to our nursery. Our business motto is fair and square dealing—a little more than your money's worth every time.

We don't aim to grow the greatest amount of plants, but we do strive to grow the best—that's why our customers stand by us year after year. The quality of our plants is our best advertisement. This is the basis on which we have built our business.

Remember when you order from us we give your order personal attention, large or small. This means that each order will represent carefully selected plants that are packed and shipped to reach you in first-class condition. Our plants are strictly healthy, properly grown on new soil, of the very best varieties. Shipments made promptly without delay, to reach you in perfect condition. You may order from us in full confidence.

Order Early and Get a Discount of 5 per cent

We make this big, special inducement because orders received before the rush season are more easily handled and our operating expenses lower. Take advantage of this opportunity and send your order early. The Old Reliable Bridgman Nursery Company stands behind every shipment. No discount after March first.

The Men You Are Dealing With

The Year 1921

We are now entering upon a period of Peace and Prosperity. It is our duty and yours to bring about and keep Peace, Prosperity and Happiness. With this aim in life let us go forward hand in hand, as one common friend into the Year 1921. May you prosper and succeed as never before.

Our 1921 Catalog

We have brightened it up a little and put a few attractions in it that may help you to keep track of it. Many of our customers write to us and say they have mislaid it, and wish we would send them another, which we gladly do when we have them. As the cost of printing, paper and everything else that goes to make it has been much greater than ever before, we hope you will not misplace this one. As soon as you get it call the family around you and read it over carefully, and let each one suggest what fruit they would like to set this coming spring, make out your order and send it in, then if you are done with it take it to your neighbors home and spend the evening there discussing it and its products and make your order a little larger than you had intended to.

You can hardly get too much planted, especially now, when all farm products seem to recede in price and money may be just a little harder to get, you will be without fruit a great many times, because fruit will not be cheaper, when you take into consideration that express rates are nearly double, fruit packages the same. We used to pay twenty-four cents for picking 16 quarts of strawberries, and now we pay from seventy-five cents to one dol-

lar per case; red raspberries were picked for one quarter of the price we now pay.

If you grow your own fruit you can pick it fresh, and whenever you want it. You are independent of the grocer, the peddler, and everyone else.

A few dollars spent for plants will be a good investment.

Our New Land Plants

The plants we have grown the past season have given the best of satisfaction, and we will give you a few of the very many pleasing letters we received this year, these are on file in our office and can be seen any time.

No methods are employed that are not at your own command. You can succeed with them just as well as we can. They are grown nature's way. No mulch or covering of any kind is used. Our plants are the hardy, strong, natural outdoor growth, with an extra long and fibrous root system, which readily adapts itself to any soil. The life and vim is in them to bring you good results.

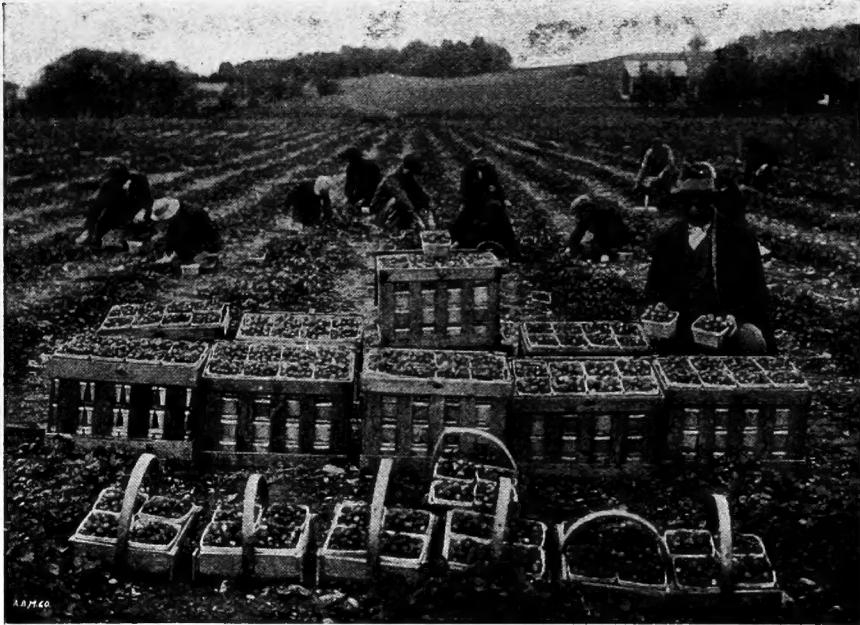

THE BEST PLANTS HE EVER BOUGHT.

Cleveland, Ohio, June 26th, 1920.

Gentlemen:

A few days ago I sent you a postal card asking for one of your catalogs, but yesterday I was fortunate enough to get one from a friend together with this statement, that your plants were the best he ever bought. I enclose herewith check for which please send me 100 Dr. Burrill, 100 Gibson, 50 Warfield. If necessary to substitute please use Dunlap. Kindly have sent to my address at Hudson, Ohio.

Very truly,
JOHN F. DODDS.

A Wonderful Harvest of Dr. Burrill—the Million Dollar Strawberry.

Our Plants are All Inspected

We have our plants inspected by official inspectors and know they are free from disease of any kind. They are selected for their luscious large berries and their tremendous bearing qualities and are so full of vigor that you are assured of large quantities of fancy berries. It does not matter where you live, we grow plants suitable for your section. We make it our business to thoroughly study this matter and many pleasant days are spent observing the fruiting qualities of those plants. We carefully note which berries are best on high soil, which on light soil, and which on low soil, and will gladly give you the benefit of our experience if you wish it, as it is for our interest to have you succeed.

And now will be the time to get ready for a plentiful supply of fruit. It looks like a good business proposition to plant and grow your own fruit. It is easily done if you will read over the few simple rules which we publish in this catalog. They will tell you how to do it and most any neighbor or friend can give you pointers.

You can Easily Succeed

It is easy to succeed with our plants, which are well packed in cool sphagnum moss. You will have no trouble in supplying your needs plentifully with fresh and luscious fruit from your own garden. Fruits are absolutely essential to your existence. Why buy them when you can just as well grow them? Send in your order now.

Why Our Plant Business Increases

A very large per cent of our increase in trade comes from customers that have bought plants from us for years and have learned where they can get plants that will bring results. These

customers tell their friends and others to come to the Bridgman Nursery Company for good plants and square dealing, the best of treatment. They know where to go for guaranteed plants, true to name, freshly dug, sure to grow, and with wonderful bearing qualities.

Twelve Hundred Dollars per Acre

It is not an uncommon thing for growers of strawberries to make \$1,200 per acre. Is there anything more profitable to raise than strawberries? Do not fail to put a few acres in berries this season; it will pay you.

We Aim to Please

By giving the best plants for the least money. By making shipments promptly. By the superior method of packing, in crates that are especially designed and made for us, giving the plants air and ventilation and assuring safe arrival at your home, fresh and full of life.

Send in Your Big Orders

Send us your orders and we will take care of them.

Winterport, Maine, June 6th, 1920.
Bridgman Nursery Co.,

Gentlemen:—Received the five hundred Strawberry plants and am much pleased with them. They were the finest plants I ever bought. Every one lived. At the same time yours arrived I received 200 plants from —, another company. One lot was no good, the other 100 were fine plants, although not as good as yours. I would not accept them as a gift. Cannot understand how a firm can do business that way. I wrote him what nice plants yours were, and shall tell all my friends where to buy again. Thanking you for the fine plants.

I remain yours respectfully,

MRS. HUBERT HALL.

Gathering a Great Crop of Strawberries.

Berry Growing is a Profitable and Pleasant Occupation

A large amount of money is easily made from a few acres of berries, if you get good plants and take care of them, and we do aim to grow the best. If you could see all of the letters we get from our customers, (if you notice they are scattered all over the Union), you will see that it is not necessary that you live next door to us to get plants that will grow. And if you will read these letters carefully you will see what they say in regards to our plants being the best. These letters are sent to us by patrons who have bought plants of us and elsewhere. These are voluntary letters, not one has been asked to write, and every letter is just as we publish them. We have given you the exact Post Office address and the date they were written to us. It is gratifying to us to receive them, and we think it is our duty to let you know how well we succeed. We are surely glad to get them, and they show you that you are safe in placing your order with us. We have just given you a few from different sections of our country.

We are receiving requests for catalogs from Italy, Holland, Mexico, Cuba, Philippine Islands, etc. If these people so far away write us there must be a reason.

It has always been our aim to grow the best, to pack and ship same to reach you in the best possible condition.

Our long experience in shipping plants has enabled us to get them to you in fine growing condition.

We have succeeded in supplying plants that have given the best of satisfaction in every section of our land, have always striven to give full money's worth to our customers, and will do the same for you. You will always get your money's worth, in good plants and fair treatment, if you will deal with us.

Easy to Grow

You will have no trouble to make them grow, as we guarantee safe arrival, in good condition. You are assured of fresh stock. If same does not appear so when it arrives at your station or the package is broken or in any way it does not look right draw the attention of your express agent to the fact and have him note on your bill the condition it arrived in.

Safe Arrival

With every shipment we make we take the greatest of care to have these plants get to you in perfect condition. They are grown and packed to reach you safely. Distance cuts no figure.

Easy Money

The plants that we grow are grown with a purpose to produce large crops of berries of extra large size, fine flavor and color. If you want some of this easy money we know of no better way than to get a good sized order of our plants this spring.

Need More Fancy Berries

There is no market but that will take at good prices all the fancy fruit it can get hold of, and you can easily supply them with the same if you just make the right start. Our well grown plants make it easy.

Ask Neighbor if in Doubt

If you wish to settle the question of soil and the varieties to plant ask a neighbor or someone who has had some experience with berries. If you get no help from that source write to us and we will gladly give you the benefit of our long experience in that line free.

Give Away Your Catalog

We don't know of any better way you can do missionary work than to find someone who is not already a customer of ours and give them your catalog. We will send you another brand new one gladly and will be ever so much obliged to you besides. There is nothing goes so far as a personal word of recommendation. You have lots of neighbors who have never heard of us and you have others who may have. Now, a personal word of endorsement from you would go a long ways toward making them customers. If you have enjoyed our catalog and feel that you ought to give a word of encouragement and help, this is the best way you can possibly do it. We get hundreds of orders every year from people who tell us that they are using a catalog borrowed from one of our customers. Every order helps.

One of Our Progressive Everbearing Propagating Beds.

Strawberries and Their Care

Planting

There are but few tools necessary. A spade, a pail, any light drag or marker, or chain, and a cultivator; this is all that is necessary after it has been plowed, dragged and rolled or floated to get it nice and level so you can see the marks; then some one to make the holes and carry the plants and some one to set them in the ground. We take a good spade, well sharpened, and make the hole just a little deeper than the roots of the plants require. Set it just about as it grew. Setting too deep means that your crown will be covered should the wind blow or the rain come.

Anyone with a little care can raise Strawberries where any farm crop will grow. Strawberries will grow; will stand more rain and water than potatoes; will come through all right if entirely covered with water for a few days. We don't advise setting where this is liable to happen, but sometimes there is a low spot in a field, and if your water never stays on it more than 48 to 60 hours, your plants will come out all right. Strawberries will stand more water than Raspberries or Blackberries. As soon as you can, go over them with a cultivator, then hoe them in the row where the cultivator did not get; hoe close and carefully. Keep up this hoeing and cultivating every ten days or two weeks. Keep them clean.

The Everbearers

Especially do the Everbearing berries appeal to the grower. After wind-up of the vegetable garden, even after the first frosts of fall have arrived, one may saunter out into his patch and gaze upon the red jewels hanging on the bushes, plants that had been planted but a few months ago, some of the bushes containing as

many as a hundred blossoms. You wonder why you never became interested in the growing of berries before, and you are at last listed as one more enthusiastic grower of berries.

Write us if you are at all skeptical about the successful raising of this fruit.

The Great Michigan Fruit Belt

We are situated in the great Fruit Belt of Michigan, and our Strawberry Plants are not exposed to the cold winds of the plains, which are apt to freeze the heart and life out of them; this accounts for the fact that we are ahead of the whole plant growing world.

Unpack the Plants When They Reach You

We wish to impress upon you this point. Liberate them as soon as you can, get them out of the package they came in, cut open the bunches and set them out in a trench of moist, loose soil, about as deep or a little deeper than you would if you were planting them permanently. They may touch each other in this trench; make an opening large enough to take the roots, place your plants in it, get the soil up against the roots and firm them on each side of the row, leaving no air spaces. Should the plants be dry, take each bunch and dip the roots in water, drain off a little so they won't be mussy, and set in the trench. Do not wait until tomorrow, nor after dinner, but now. They can be left in this trench a long while and still be in condition for setting out. You will be surprised how nice they will straighten up in 24 hours. If anything is wrong you will know it the next morning.

Do Not Fail to Include Dr. Burrill and Gibson in Your Order—They Are Both Big Money Makers

Parcels Post

	2nd zone	3rd zone	4th zone	5th zone	6th zone	7th zone	8th zone

65 pounds	.69	1.34					
70 pounds	.74	1.44					

As high as 70 pounds may be shipped in one lot to 2nd and 3rd zone and 50 pounds to all other zones. In addition to postage add 1 cent for every 25 cents of postage for war tax revenue.

Manure

It is a good plan to spread your manure nice and evenly, and go over it with a disc or common spring drag. It will pay you to do this several times before you plant your field.

Mulching

If you live in a country where your soil heaves out the wheat, clover, and so on, in the winter time, mulch your plants with wheat straw, wild grass, or pine needles. Anything that will prevent repeated freezing and thawing during the winter. The best time to apply the mulch is when the ground is frozen so you can go on it with your team. When the leaves commence to start up in the spring rake off toward the center.

Fertilizers for an Acre of Ground

You expect and want a good crop, a fancy lot of berries. Don't expect to get them unless you help them along as much as you possibly can. Spread 15 to 25 loads of manure over the ground, disc and drag it in before plowing. Also bone meals, acid, phosphate, and potash up to 250 lbs., all thoroughly scattered and worked into the soil. A good clover patch is nearly as good with the addition of some manure. But if neither of these may be had, any good garden soil will more than repay you for your time and trouble. Make your rows 2½ to 3 feet apart with plants 15 to 20 inches apart. Set them as we tell you, firmly in the ground, and then go after them with your garden tools.

Season

We sometimes ship strawberry plants in March. The season is thoroughly open first of April, and then on to the end of May.

General Culture of Strawberries

May be summed up in a few lines:
Soil in good condition. Good plants well set.
Care after planting, and mulching if your soil heaves.

Inspection

Our plants are thoroughly inspected by highly-qualified and authorized inspectors before being dug and you can rest assured you will receive only strictly healthy plants of the very best quality.

More Strawberry plants are grown in this immediate vicinity than in any other section of the world. This seems to be nature's selection for strawberry plant life. They are usually covered with snow, which gives them the covering of nature, and just enough cold to harden up and have them in fit condition to ship to any distant point. The plants always come out in the spring time in the very best condition, full of real active life and energy, and are immune to any change of climate you may subject them to. This is one of the reasons why they are prime favorites all over this country. Plants that are grown in a warm, sunny climate and are used to continual sunshine and have seen no winter of any kind are apt to be too tender, and the change from there to your locality might not be as sure of success as those grown farther north.

Clearwater, Kansas, 5-14-1920.

Bridgman Nursery Co.,

Dear Sirs:—The berry plants came O. K. They are sure fine plants. I am well pleased with them and I am sorry that I did not send for more of them, which I would have done had I known they were such fine plants.

I am asking this question: Do you think it will be too late to send more plants?

Now, if you think it is not too late, I am letting this to your judgment. And if not too late send the following plants by express. 150 Cumberland, 100 Kansas, 25 Mersereau Blackberries.

A. J. MILLER.

As this was the middle of May when this was written and the order was to go to Kansas, where the season is some earlier than here, we did not feel safe in sending these plants, as it would be very late, and the chances would have been against a good start.

Shabbona, Ill., June 9th, 1920.

Bridgman Nursery Co.,

Dear Sirs:—I should like some extra Strawberry plants by mail, if you can send at this late date. My catalog is misplaced, so please send me another, as I may send a fall order.

What time do you send out Red Raspberries for fall planting. Please send me 100 Senator Dunlap, 100 Gibson, 50 Progressive, for which I enclose a personal check. As I don't recall prices I shall guess at prices and you can remit difference, or if not enough I will send more. The other order came through in fine shape. Very truly,

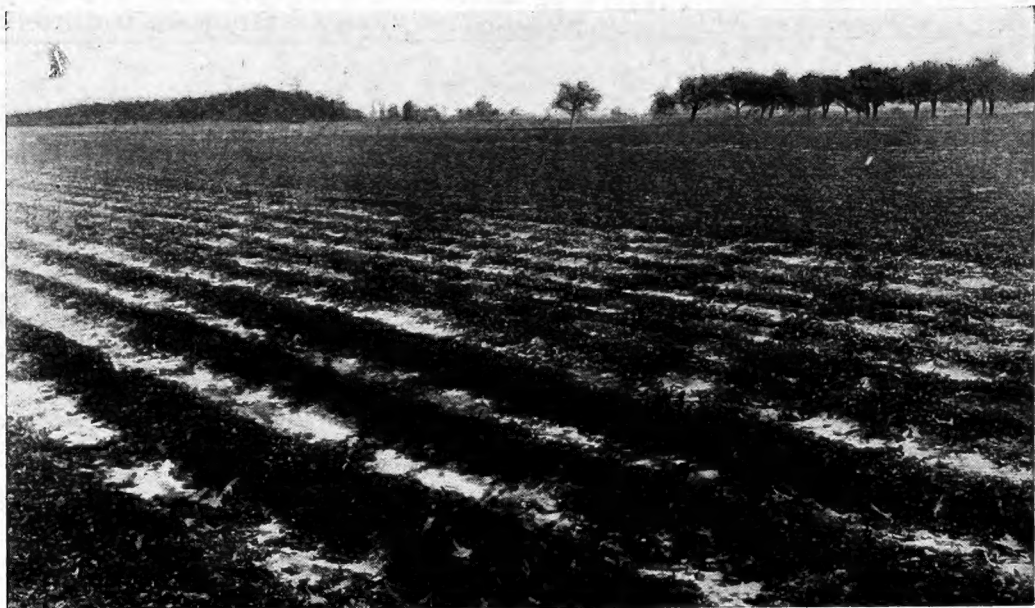

EDITH SAWYER.

This order is also too late for Illinois.

Friendly, West Virginia, 4-2-20.

Gentlemen:—Enclosed please find money order for 250 Progressive Everybearing Strawberry Plants, to my address, Friendly, W. V., on the B. & O. R. R. These plants are for two of my neighbors. The plants I ordered from your firm last year were just fine. Have a fine bed this year.

ROBT. V. MCCOY.

From photograph of a field of *Progressive* taken on our farm in October.

PROGRESSIVE

The Best of the Everbearing Strawberries

These strawberry plants have been selected and grown by us after many years of study and care, and they are still truly Everbearing in every sense of the word. With this new berry which we offer to you as the Bridgman Nursery's best we have produced a berry that is so full of life that it is needless to pinch off the buds which come on them during the summer. If you have no winter you will continue to get berries, nice ones, red, rich and juicy, sweet and aromatic, and lots of them. The original plants set in April or May will have often times more than one hundred berries to a plant at one time, having ripe berries, green berries and blossoms all on the plant at the same time.

The *Progressive* is a wonderful fall-bearing strawberry and considered the best by many growers. The spring-set plants not only produce a big crop of berries the same season, but the runner plants commence to bear fruit as soon as set, and quite often you will find a runner plant full of blossoms and berries before it has made any roots, and in this way *Progressive* yields a crop of fruit the first year that is truly wonderful.

Two Quarts of *Progressive* per Hill

If you wish to keep your berries in hill culture, give them good care and see that they need for nothing in the line of plant health (or food). You will get the above amount from most of the hills.

For the Home Garden

The *Progressive* strawberry is as essential as anything that you plant in your garden. You will have more real enjoyment out of a bed of these berries than out of any one thing you can grow.

Progressive are the **earliest of all berries**, also the **latest**, as it bears from very early summer until hard freezing weather. You have a combination of the earliest and the latest, sweetest and the most productive. If you have missed this every season don't do so again.

Send Us a Trial Order

Be sure and include at least a liberal supply of *Progressive* plants in your order this year. We have a good supply of them. Just a little of your spare money invested in *Progressive* plants will bring you large returns. Fifty cents or one dollar per quart is a very common price for them, as they come when other berries are gone.

You would naturally think by these plants bearing constantly they would produce small berries, but not so. They are as **large** as all **commercial strawberries**. Are of the **finest** flavor, of splendid color, and the **sweetest** by far of any strawberry grown. You would hardly believe this until you saw it yourself. No frost can spoil your crop. You are absolutely sure to get berries if you get our *Progressive* plants.

At our home they like the Everbearing so well that they wait for them to put away for winter. They are so very sweet that but little sugar is needed. The color is a dark crimson, and one of the richest and best looking of all the strawberries you can put up. **The plants are free from all defects**, is a good plant maker, and a **miracle in strawberry life**.

Progressive strawberries will eventually be in everybody's garden. You will not need to wait until next year to get a full crop, but you will get it the first year you plant, and a still larger crop the next year.

A ten-acre field of Dr. Burrill. Photo taken on our Berry farm.

DR. BURRILL

THE MILLION DOLLAR STRAWBERRY

Dr. Burrill should be included in every order sent to us this year. We fruited it during the season of 1920 and found it to be a berry of the Dunlap type, a splendid shipper, having a nice rich red color, large and firm enough to make a desirable berry. Wherever known Dr. Burrill is gaining many friends and we advise putting it in your collection this year. The plant will make a good fruiting row under the most trying conditions. It is healthy and productive and a few days earlier than the Dunlap, which it greatly resembles. We have a wonderful stock of them and every plant is true to name.

The call for Dr. Burrill has been exceptionally great, in fact so great that we were

all sold out long before the season ended. To give you an idea of its reputation in the West one party has placed an order with us for spring delivery, for one hundred thousand Dr. Burrill. We can fill all your orders easily. We have the very best Dr. Burrills you can buy, every plant a perfect beauty and sure to grow. Try them. If you have had trouble getting good fruiting rows heretofore with other kinds we can assure you success with our Dr. Burrill.

The mother plants grow large and are heavy crown builders, making it unequalled for hill culture and it is equally well adapted for any of the other systems of culture.

If You Want The True DR. BURRILL Send Us Your Order

If you want the true Dr. Burrill, the sensation in Strawberries for all purposes, the strawberry that is a good plant maker, a great cropper, of finest flavor and color, the very choicest berry for table and preserving, a frost and drought resister, be sure and send your order as soon as you can. We have a fancy lot of them.

SENATOR DUNLAP does well in most localities, is a fine table and canning berry, a good shipper, an excellent cropper.

You can't go wrong if you set our Dunlaps, which by continuous selection for health, vigor, and productiveness have continued to improve under our system of cultivation until they are recognized by Fruit Plant Inspectors, by men thoroughly versed in the ways of fancy fruit culture, by nurserymen, by our neighbors, as a plant of highest merit, with productive qualities unsurpassed. The berry is a beautiful crimson color, large size, firm, dark red flesh, its bright golden seeds making it very attractive. On account of its great firmness it can be shipped to distant markets. Holds up a long while after being picked.

The wonderful vigor of the plant will fill your row a long time before any of the others get fairly started. The plant makes runners so freely that you must check it by keeping the row cut down to about eight inches wide. Don't let the plants mat too thickly.

PREMIER (Per.) The Premier is a fine berry. Its earliness and great productiveness will soon bring it to the front and make it one of the leading berries for market. Being comparatively a new berry it is not well known, but those who have tried it during the past year praise it very highly and say it is a great acquisition to the standard kinds of berries. We recommend it being given a good fair trial. The plant makes a nice growth, has a bright waxy appearance, and is distinguishable from other varieties. We have a nice stock of them. The introducer gives this berry a great boost. We have not fruited it, but from the description given by a reliable nursery company, would say it might be good business to try them.

COLLINS (Per.) Introduced by Mr. C. E. Whitten of Bridgman, from whom we have procured our supply of plants for propagating purposes. You run no chance of getting anything but the true Collins from us. The plant growth resembles Bederwood very much. Indications are that it is a much healthier plant and Mr. Whitten says the color is a deep red and has a good flavor. As we have not fruited this berry we still think it may be the berry for a great many people, and believe it will succeed where many others fail.

AROMA (Per.) A popular berry grown by many in place of the Gandy. Foliage smooth, deep green, of spreading habit. The leaves are long, broad and clean. As a pollinizer for late pistillates it is unexcelled. The berries of this variety are very large, bright red. The flavor of the fruit is deliciously aromatic and very rich, the flesh is smooth and solid. A very popular berry in the South.

CHARLES THE FIRST. Charles the First has proven itself one of the very best early berries, yielding more quarts of fine, large berries than any other early variety. It is a strong fertilizer and very thrifty grower; berries are large, regular in form. Recommended by successful berry growers.

BRANDYWINE (Per.) The berries are glossy crimson, very handsome, firm and solid, excellent in quality, with fine aromatic flavor. Plant is remarkably vigorous. Midseason to late. Thrives best on good strong soil.

BEDERWOOD (Per.) One of the very best early varieties for home use or market. It is a splendid grower, making a large number of strong runners. It has a perfect blossom, and is immensely productive. Fruits of good size, light red, medium firmness. One of the best to plant with early blooming pistillate varieties.

A.B.M.C.
**PREMIER
STRAWBERRIES.**

MAGIC GEM. One of the very latest introductions. A very strong plant and makes a good row of thrifty looking plants. Berries of very best flavor, good size and color; will ship to nearby markets in good condition. Very productive and recommended for the home table. A southern grower says, "Magic Gem berries are so large that they will not go into a common water glass."

KELLOGG'S PRIZE. This is a pistillate variety and is claimed to cover a long season. The originator describes it as follows: "Kellogg's Prize continued to bear a little later than the Sample and Stevens' Late Champion, and was the last to be found on the vines. If the public knew of the value of this variety the demand for plants could not be supplied." Very highly colored, with golden seeds, the rich coloring extending to the center; flavor delicious; the cap is ample and in harmony with the size of the berries.

HAVERLAND (Imp.) This is a midseason producer. The plants are healthy, vigorous, and large, producing ample runners; the stems are unable to hold the fruit from the ground. This makes mulching desirable.

POCOMOKE (Per.) From the standpoint of a commercial grower, this comes very near being a perfect variety. It is a healthy, luxuriant grower, making plenty of runners, and is an abundant bearer of large, firm, bright red berries. Never mishapen and holds up in size better than a great many varieties. It is a superior berry in every way. Very popular as a canner. Needs no petting and will produce large crops under reasonably good culture.

GIBSON (Per). A wonderful Strawberry. Gibson commences to bear with Senator Dunlap, Warfield, etc., owing to its productiveness it continues till quite late, so we class it with our medium late varieties. It is a very strong grower, with long roots that withstand dry weather; has plenty of dark green foliage to protect its enormous crops of fruit from the direct rays of the sun.

The Gibson, the berry that is bound to make Bridgman as famous as the automobile has made Detroit; real genuine Gibson can only be found here, its home and origin. It should by all means be in every collection and is the best berry before the American people today. Once grown always grown. One of the reasons is that it holds its size; the last berry is just as large as the first. One young lady picked during the past summer in ten hours 368 quarts. This will give you an idea as to its size and the ease with which it came off the vines. It is a good shipper and a good firm berry and uniform in size. The berry that everyone will plant when known. It is but a few years since its introduction and nearly every order has Gibson in it.

The vines are loaded with berries. You will hardly understand how the plants can produce such quantities of fruit.

Berry is extra large. One of our very largest strawberries.

Beautiful dark glossy red. The flesh of the berry is read clear through. Calyx bright green, adding to its beauty and market value.

Flavor fine; a perfect table and canning berry and owing to its tough skin is one of the very best shipping varieties.

Fruit stems strong and upright.—This keeps the fruit clean and easy to find and pick.

The Gibson has been grown extensively in this county for several years, and is one of the most profitable commercial strawberries in the great "Fruit Belt." Will produce 850 cases on an acre. Growers are setting Gibson in large lots.

GLEN MARY (Bisex). A well known variety, bright green foliage, upright grower. The Glen Mary is semi-staminate. Berries are big, dark red beauties with prominent seeds of bright yellow; the meat is rich and juicy, crimson in color. It is very popular for fancy market.

SAMPLE (Imp.) Season very late. The Sample Strawberry is admired by everyone who has seen it. Berry is of large size and fine quality; quite firm; continues a long time in fruit; the berries are large to the last. Colors all over at once. Foliage perfect, fruit perfect. Sample is one of our best late strawberries.

STEVENS' LATE CHAMPION (Per). This new late variety seems to do well wherever tested. Very large, fine flavored, bright color, good shipper, a fine bed maker, a heavy yielder, fine foliage. It ripens later than the Gandy. It certainly is a strong and healthy grower, and a prolific bearer.

WARFIELD (Imp.) One of the oldest, best known varieties of strawberries grown, and it still has many staunch friends scattered everywhere, who have grown it regularly and find it one of the best. It is a good sized berry, dark color, fine flavor, very productive. Warfield grows particularly well on heavy soils, a clay soil seems to be its home. Wherever you offer Warfield berries for sale you have no trouble in getting customers. For canning purposes it has no superior.

WM. BELT (Per.) A very fancy berry; in size it is all that one can ask, of the very finest flavor, beautiful bright red color, very prolific, plant free grower. Has nice green calyx and the berry, which is a fire red, has an extra blush at its tip, the color radiating makes it one that you will notice among the best. A most tempting and delicious berry.

Warfield Strawberries.

Black Raspberries

Should have a nice, warm, dry piece of land. One that is quite sandy is best. It takes a light soil to keep Black Raspberries healthy and to make them bear.

As soon as the new growth has attained a height of 2 feet go along and pinch out the tip of the new growth. If we have a large field to go over we take a sharp butcher knife and hack them off as near the top as we can, cutting off from two to three inches of new growth, then in the following spring, just after they show life, trim all of the laterals or new shoots that have come out, so they will be about six inches long. Then you will have a cane that will support itself, and the berries will be larger and of better flavor.

CUMBERLAND. The most popular Black Cap at the present time, because of its great size, firmness and productiveness. The fruit is the largest of the raspberry family, often measuring seven-eighths of an inch in diameter, and is of such handsome appearance that it is sure to bring the top of the market. Cumberland is very hardy and will stand many degrees below zero without injury.

We have fruited all of the other varieties, but they all fall away behind the Cumberland. We have fruited it for a number of years, and if you trim them back so the stalk will be not more than 2½ feet high and cut the laterals off to six inches in length, then you will get fruit that will surprise you and give you the largest picking season of any black raspberry. Cumberland sets so many berries that it is absolutely necessary to give it a severe trimming. It could not hold up the immense load if they should all attain their proper size.

PLUM FARMER. Very good cropper. Nice large berries, but somewhat soft. This variety is not gaining in popularity as it promised a few years ago. Experienced growers do not favor it very strongly. It comes a few days ahead of Cumberland.

KANSAS. Entirely healthy, with tough, clean, hardy foliage. The fruit is large, of black, glossy color, entirely free from bloom. Firm and of best shipping qualities; wonderfully productive and extra long picking season.

A Bunch of Our Cumberland Black Raspberries—the Most Productive and Largest Berries Grown.

HOOSIER. This valuable black raspberry is a money maker. This new variety is one of the finest and most profitable black raspberry on the market. Hoosier will please you and make you big profits. The plants are hardy, do not winter-kill, and will mature a good crop. Canes are strong and are proof against anthracnose and other raspberry pests. Hoosier ripens with Cumberland, mid-season.

Red Raspberries

Red Raspberries are recognized as a great money maker. An acre planted to assorted varieties will make an income of many hundred dollars per year, and come in a season when you have time to look after them.

They will grow in any soil where water does not stand. On high or low land great crops are grown. They should be planted in six feet rows, plants about three feet apart, to get nice large berries. Should be trimmed down to about 2½ feet high.

King

This variety is rapidly replacing the Cuthbert berry in all sections where the former has become known. Being a perfect beauty when

picked, coming early and fruiting long, it is an immense cropper and becoming more popular each season. The bright red berries, as large as a copper penny very firm and fine flavor, pick nicely and do not crumble like some berries. Becoming too ripe does not affect the color at all. They are indeed a showy fruit, perfectly hardy and healthy in every way. There is more money in raising King Red Raspberries than any cane fruit we know of. One of our neighbors made \$3,500 on six acres of Kings the past year. We certainly cannot recommend the King too highly. If they were as well known as some of the older varieties our stock of plants would not last long. All growers should have the King.

Get Started in Red Raspberry Growing This Year
Wonderful Producers—Big Profits
A Big Stock of Plants at Reduced Prices

RED RASPBERRIES—Continued.

CUTHBERT. Late market variety, strong grower, immensely productive, fruit firm, large size, of finest quality; season medium to late; hardy, yielding immense crops wherever planted; a general favorite for an all-round berry. Plant it for home use or market.

MILLER RED. An early berry, does not winter-kill. We think it is the best shipping berry grown; makes a nice growth of canes; for best medium season berry, set Miller Red; keeps its bright color a number of days after being picked; a good, hardy all-around berry.

Purple Cap Raspberries

COLUMBIAN and HAYMAKER. Are neither red nor black, but seem to be half of each. The berries are covered with bloom and present a very enticing appearance when picked. Of very pleasing flavor, good size, and prolific bearer; fairly hardy, succeed on all soils; have met with great favor here. The purple caps produce an enormous quantity of fruit, and since they are becoming better known, are selling well in the large markets.

Everbearing Raspberries

ST. REGIS EVERBEARING RED RASPBERRY. The most valuable of all the late introductions in the line of red raspberries, and do well upon light or heavy clay, sand, loam, or gravel. If you will give them clean cultivation and keep down the extra plants you will be well paid for your work. A patch of St. Regis presents a beautiful view when in full leaf, are almost as attractive as a hedge of ornamentals; the habit of growth is of a bushy nature, and with their large dark green leaves, which completely cover the bush, they look as proud as a peacock, and the leaves remain on them until cold weather comes. The plants are marvelously healthy and productive; will produce berries the first year in the fall, and a full crop the following spring and again in the fall. We have met many commercial growers who say St. Regis is absolutely the first berry in spring and have no competitor in the fall. Try St. Regis

St. Regis.

and see what they will do with you. Will grow as well North as South. We have a fine stock of plants which we are offering at very low prices.

St. Regis berries sold for us in the open market, Chicago, last September for \$7.00 per 24-pint case.

Blackberries

Should be planted in light, dry soil, about 4 feet apart and with rows 7 feet, requiring about 1,800 plants per acre. The blackberry root likes to get down in the ground away from the surface, where it gathers those elements that are necessary for a crop of berries. If the soil is wet, its roots can only be on top, and a little dry spell cuts the crop. Can be grown without much trouble, are very easy to start. Simply make a hole with a spade and set the plant; put it in the ground fully as deep or a trifle more than it had been; it is not advisable to let them grow too high. When about 2½ or 3 feet high, pinch out the centers. This will give you the growth on a stronger stalk and help the plant about keeping up. Your laterals will also be nearer.

For nice, fancy fruit it is quite necessary that you do not leave too much wood. A good picker can pick from 100 to 150 quarts per day, and the crop is a good paying one. The blackberry has many uses, is one of the rare gifts of nature. Blackberry Wine, Cordial, Blackberry Pie, are just a few of its uses. A nice large patch will bring you many friends.

WILSON'S EARLY. The largest and most productive of the blackberry family, produces fruit in large clusters, holds its color better than any berry that is put upon the market, and brings the highest price at any and all times. It is a berry that can be shipped thou-

sands of miles, and reach its destination in good shape. It is a berry that is always firm and can hang on the bushes for eight or ten days after ripening. In localities where it is known and its culture understood it is preferred above all others. The Wilson Blackberry plant is somewhat tender and needs to be protected from severe cold weather.

BLOWER BLACKBERRY. A very large blackberry of delicious flavor, jet black in color and a thrifty, upright grower. This variety is very hardy, very productive, and we recommend it for the home garden. It is not quite as firm as some, still firm enough for shipment to near markets. A great many Blower Blackberry plants that are offered for sale are mixed.

EARLY HARVEST. If you want a blackberry that is sweet, ripens early, and produces great crops, has the exact flavor and looks of the wild berry, which it resembles in growth and size, grow this one. Not very hardy.

MERSEREAU. Mammoth early ironclad Blackberry. Will stand 15 to 25 degrees of cold; needs no winter protection. Free from blight, rust and other diseases. Exceptionally sweet, rich and luscious. Canes of strong, upright habit, always strong enough to support the great crop of berries; bears regularly every year in any climate. A midseason berry, following Early Harvest; should be in every field.

ELDORADO stands at the head of the list. They never freeze back in Michigan, and we hardly know how cold it will have to be to kill them. They do well in the cold Northwest, where the cold is intense. They have replaced the Snyder, being twice as large and wonderfully productive. Are of fine quality, firm and good shippers, and for cold regions have no superior, doing equally as well in the warmer sections. It needs no winter protection. Eldorado will please you in every way. The real genuine Eldorado can be depended upon to produce great crops of luscious, sweet, blackberries wherever you may be. We have a large stock this year.

Grapes

The demand for grapes is getting better every year and prices are higher. There will be a shortage of vineyard products, and the American grower will be the gainer. Should be planted about eight by twelve, requiring about four hundred and twenty-five per acre. Grapes are very tempting fruit, and can be grown in any locality. Should receive regular trimming, cutting off all the new growth but four laterals, two each side of the main stalk, and these trellised on the wire so they nearly meet the laterals reaching from the next vine, making it nearly one continuous line of laterals, one on each wire; no side shoots of any kind. This is the Michigan way, and we raise many thousand carloads of grapes in this (Berrien) county. The grape would make jelly, jam, preserves, raisins, cordial, wine, vinegar, and grape juice, besides other table uses. It responds readily to good cultivation and fertilizing.

CONCORD. A large blue black grape, ripens in Northern States about the middle of September. A vigorous grower, the standard for productiveness and hardness all over the country. We advise setting Concord for main crop. They are an excellent grape and will please you. Seventy-five per cent of the grapes grown here are Concord. They will outbear any other variety, and when ripe are of best flavor, stand shipping to long distances, and many carloads from here go to Oklahoma, Kansas, Missouri, Minnesota, and other states.

Eldorado Blackberries.

NIAGARA (White). The most popular white grape in existence. Fruit large and very productive; a good grower; ripening same season as Concord; equally good; valuable in every way.

Three-year-old Niagara and Concord, \$1.50 per vine. Will bear this year, full crop next season.

Rhubarb or Pie Plant

This very desirable vegetable comes early in the Spring. The large stems of the leaves are used for pie-making and stewing. It is also desirable for medicinal purposes. A deep, rich soil is indispensable to secure large, heavy stalks. Plant in rows four feet apart, with the plants three feet distant. Set so that the crowns are about one inch below the surface. Top dress in the fall with stable manure and fork under in the spring. The great value of Rhubarb has always been its earliness.

Linnaeus. This variety produces a small stem of fine quality; early; excellent for cooking.
Victoria. Very large and valuable for market. Early. Quality good.

Gooseberries

This fruit is very useful for cooking either green or ripe, and is used for canning extensively. Requires the same cultivation and treatment as currants.

Downing. We have a large stock of plants, but advise early orders. The Downing for general planting or the garden and home use is the best. This variety is a pale yellowish-green in color, large in size and of good quality. The bush is a thrifty grower and very productive.

Houghton. Fruit medium sized, pale red when ripe, sweet and tender. Plants hardy and annual bearers of great crops. The growth of plant is somewhat willowy, easy to pick, scarcely any thorns.

Remember when you buy plants from us, you are buying the best. All are taken from new fields, from fields that have never been fruited. They are full of life and vitality. Plants taken from a bearing patch will never do as well as those from a new setting. For great big crops of fine berries you must get good plants, and you will not find them in an old patch where you are liable to get all kinds of inferior and diseased stock. **EVERY PLANT WE SHIP YOU IS FROM NEW SETTING.**

Currants

Currants are very hardy and easily cultivated, do well on almost any kind of soil, and will stand more neglect than any other fruit. They can be planted to advantage between apple trees, to "fill in" in the orchard. Currants ripen between the Strawberry and Raspberry season, and are profitable to grow for market, as the demand for Currants is always greater than the supply. They are the most popular fruit for jellies and preserves, and should be in every garden.

HARDY, RELIABLE CURRANTS IN STANDARD VARIETIES. RED VARIETIES.

Perfection. This splendid variety was originated by Charles Hooker, of Rochester, by crossing Fay's Prolific with the White Grape Currant, and combines the size and color of the Fay with the productiveness and fine quality of the White Grape. The berries are of rich mild flavor, sub-acid. In quality Perfection is the best Currant on the market. By mail, strong 1 year old plants, each 30c; 12 for \$3.00, prepaid.

Cherry. Bush is vigorous, stocky and compact, and must have good cultivation to do well. Berries are very large, with thin skin, juicy and of fine flavor.

London Market. Bush is vigorous, and upright growing, very productive, a popular sort in the Michigan fruit growing sections. The fruit is of good size, dark red in color, with sprightly acid flavor.

Red Cross. A good commercial variety that should be included in every collection. The quality is good and size of berries uniform. The clusters are large, making it very easy to pick. Makes abundant wood growth. Good for market or home.

Fay's Prolific. One of the strongest growers and exceedingly productive. Clusters and berries very large; of attractive bright red color, even when dead ripe. Quality excellent, with mild sub-acid flavor. Ripens early and remains bright and firm until quite late. Good market sort. Bush grows upright and vigorous. Few varieties equal Fay's Prolific.

Lee's Prolific. A newer currant than Black Naples, much alike; the berries grow larger, and ripen a few days sooner. A good long-lived variety full of medicinal properties, and unequalled for jams, jellies, fruit cakes, etc.

Horseradish

In planting horseradish, fit the soil the same as for Strawberries, and plant the cuttings point downward, with the top of the cutting about one inch below the surface of the soil. Set about 1 by 4 feet apart, and cultivate same as any garden crop. In about two weeks the leaves will show above the surface, and in due time will shade the ground so that weeds will not bother it much.

Asparagus.

London Market Currants.

Asparagus

Is one of the standbys in every well kept garden, it is one of the most healthful as well as nutritious of all garden vegetables. An asparagus bed once established will last a lifetime. The housewife is always anxious for the time when she can go out and get some nice, fresh, crisp and tempting asparagus for dinner. It is easily grown in rows $4\frac{1}{2}$ feet apart; trenches should be made and well filled with rotted manure; soil should be put over the manure before setting the plants, which should be set about two feet apart in the row.

You should get good strong plants of reliable varieties. The asparagus bed should have a top dressing of manure every fall.

We have two reliable varieties that are grown for the market.

BARR'S MAMMOTH. This variety is known everywhere. Is of large size, rapid growth, and of best quality. Stalks of this variety average an inch in diameter and bring highest prices in the market. It is deliciously tender and crisp.

PALMETTO. A valuable variety, widely planted. An early variety grown with great success. An asparagus bed will last a lifetime. Put it where you know for sure that you will not need the ground. Very early and of excellent flavor.

Be sure and grow your fruit from our plants this year. We have a large stock of everything we list, all first class, and the price cut down to suit the times.

Express Office and Post Office.

Give us the name of the Express Office to which you want the goods shipped, and also the Post Office where your mail goes. Post Office and Express Office are not always the same, and mistakes will occur if both are not given.

Be Sure to Mention Order Number

When writing about an order that has been placed with us, always mention the Order Number we gave you. Write your name and address every time you write to us.

How to Send Your Money.

Send us Express Order, Money Order, Draft, or Personal Check. Sign your name plainly. Give us the name of your Post Office and Express Office when writing.

When You Send Your Order.

One-third of the amount sent with your order will hold and book it, the remainder to be sent before you want it shipped.

No C. O. D. Shipments.

We have made our prices on a cash basis, and guarantee safe arrival of plants, which insures you against any loss.

Delayed Shipments.

If your order does not arrive promptly, or is in bad condition, let us know at once. If it is the fault of the Express Co., have them make a memorandum of the same on your Express Receipt.

Packing.

We make no separate charge for packing and boxes on retail orders.

Rush Orders.

We have Western Union Telegraph and Long Distance Telephone in our office.

One Dollar Orders.

We like nice large orders, but to become acquainted and introduce our well grown plants to you and your friends, we will gladly book your order for as low as one dollar. Please do not send any order for less than one dollar, as the cost of Booking, Filing, Receipting, Packing, and other labor costs us more than the plants.

Shipping Season.

Our soil and situation enables us to make early shipments. We are near the Indiana State Line, and being within two miles of Lake Michigan, which is one of the largest bodies of fresh water in the world, whose surface is never entirely frozen over, this prevents the soil in its immediate neighborhood from freezing very deep and when a few warm days of spring come we are ready to fill your orders.

Early Shipments.

Our shipping season commences the latter part of March and should close the middle of May.

Second Choice.

Mention your second choice in your order. This will not be necessary until late in the spring when we may be sold out on some varieties you want.

True to Name.

We take great pains to have our plants reach you true to name. If not, let us know at once and we will replace same free of charge, but we will not be responsible for any greater amount than was originally paid for the plants. If plants are not as guaranteed let us know upon arrival of same.

Weight of Plants

Per 100 Plants.

Strawberry, Dunlap	3 lbs.
Belt, Pocomoke, Gibson	4 lbs.
Red Raspberries	5 lbs.
Black Raspberry tips	6 lbs.
Dewberries	4 lbs.
Grapes	12 lbs.

These weights vary some, but it will give you an idea of the amount of postage it will require.

Number of Plants Required to Set an Acre

3 1/2 by 18	8,297
24 by 3 1/2	6,222
30 by 3 1/2	4,356
24 by 48	5,445

When you buy our plants you are starting right. They are perfect in every way, and the results will be more than satisfactory. Nowhere will any person be able to produce a finer crate or box of berries than you can from our Lake Zone plants. We want you to know this.

PROGRESSIVE

The Wonderful Everbearing Strawberry

Other Everbearers come and go, but Progressive stays at the head of the list. As the Progressive bears all the time, you gain nothing by planting anything else.

For small gardens we recommend hill culture. The plants should be set in the open, not under trees or shrubs.

We have tried all of the commercial kinds of Everbearing strawberries, but find none near as good as PROGRESSIVE, which bears all the time. What more could you ask?

If you have help and only a small piece of ground you can make money easier and surer by planting PROGRESSIVE Everbearing

Strawberries. Some growers, where they take good care of their berries, get as high as one dollar per quart. We have heard of single acres bringing as high as \$1,500.00. Remember, there is absolutely no risk taken; when you set Everbearing PROGRESSIVE, you get your money back right off. Set in April, you can commence to sell berries in the fore part of July, and then on until it gets too cold to pick them, and still they are full. The plants have ripe berries on them at all times, good, large, red, sweet, luscious, berries.

If you like berries get our sure-bearing PROGRESSIVE.

Concord Grape Vines

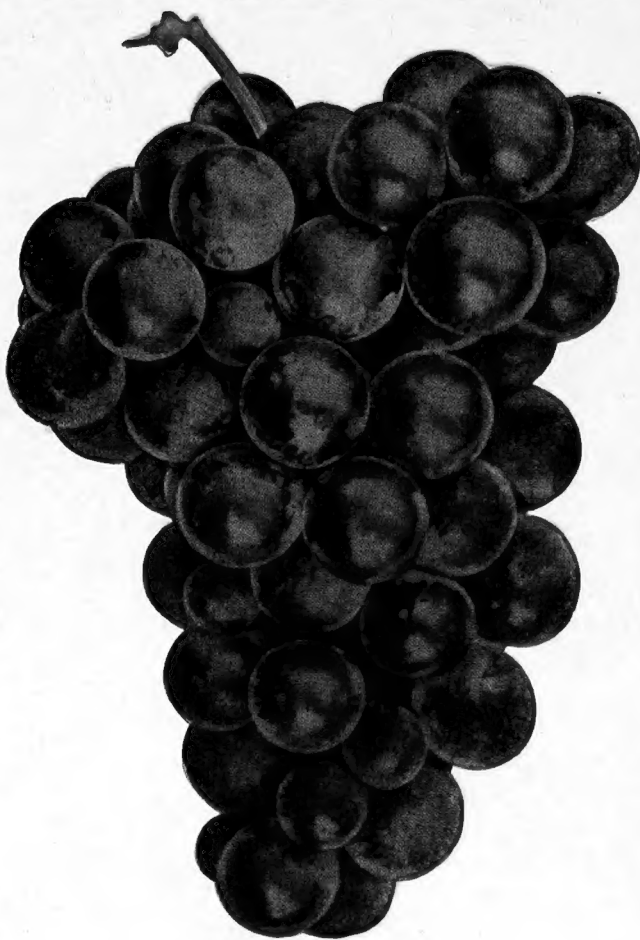

*Half a Crop the Second
Year, Full Crop the
Third Year after
Planting.*

The Concord grape vines we are offering this spring are the finest we have ever grown. They have a splendid lot of fibrous roots which insures them a good growth. Concord grapes will stand a lot of cold weather and bear great crops; you can depend on them to produce annually. The vine never winter kills, is healthy, and prolific. It needs no winter protection and when well rooted will live many years.

The grapes are of a decidedly pleasant flavor, in color a pretty blue black. The clusters are large enough for table use, and the vine comes into bearing soon after being planted. It is one of the good and permanent investments to plant grapes.

There is a great deal of pleasure and enjoyment you can get out of a medium sized grape patch. You can get your grapes for that delicious home made grape juice, grapes for the table, for jams, and numerous other good things that can be made out of them.

One acre of land set to Concord grapes will yield from four to five tons of grapes every year. Which will give you a life income of from three to five hundred dollars per acre.

Concord Grapes.

Orleans, Mich., April 29, 1920.
Bridgman Nursery Co.,
The order No. 02841 has arrived and the plants are certainly fine. We never got better plants. We thank you.
LEVI HOWE.

Nephi, Utah.
Bridgman Nursery Co.,
Dear Sirs:—Your order No. 3076 received about a week ago in excellent shape. I am well pleased with the plants.
Yours truly,
WALTER A. SILLS.

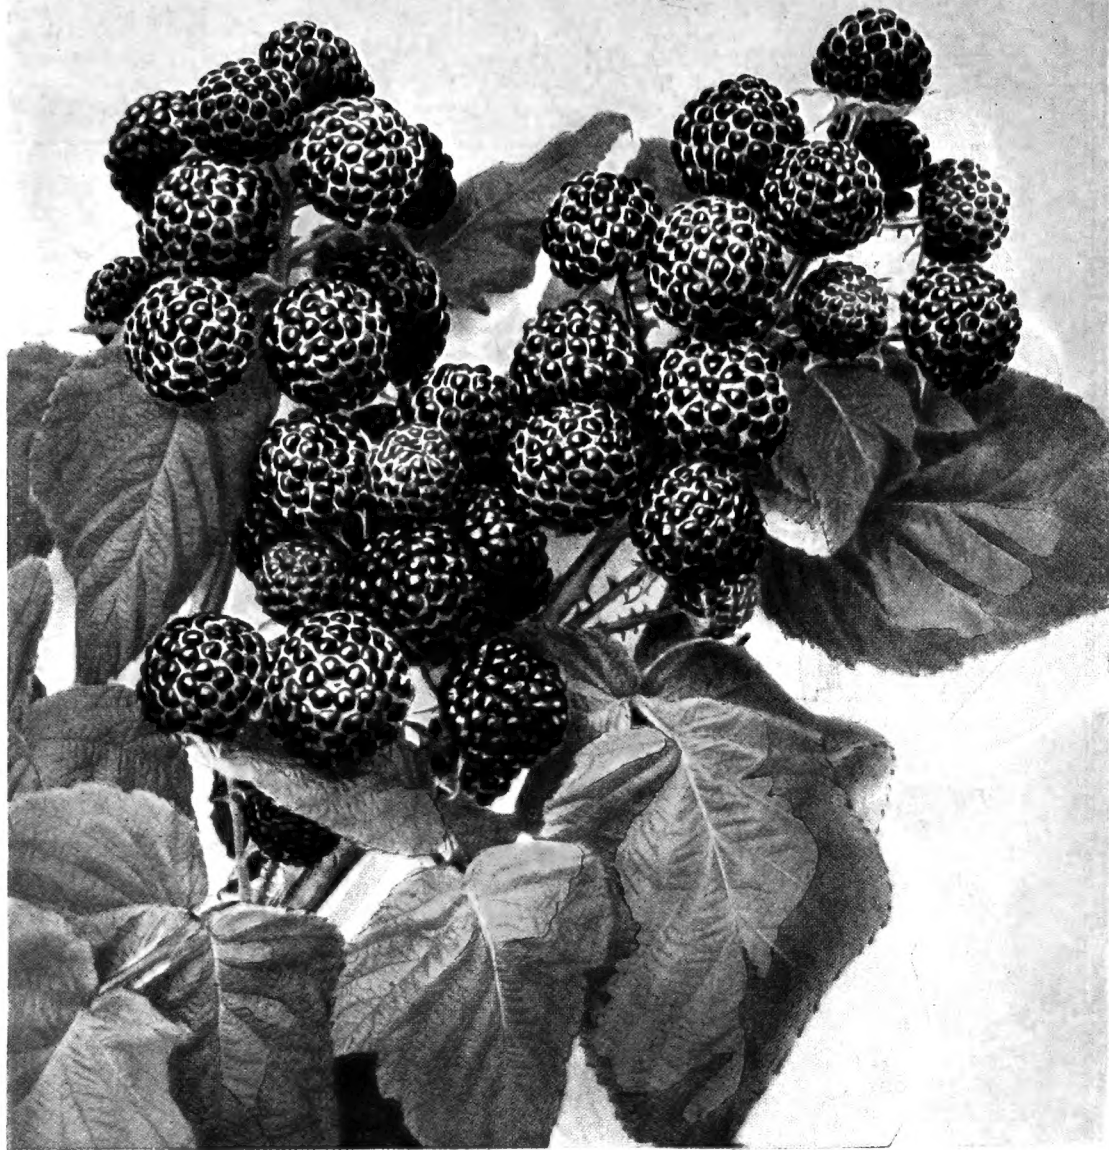

Rockford, Mich., June 12th, 1920.
Dear Sirs:—Last spring (one year ago) I purchased some Strawberry plants (500) from you and I am pleased to report I never saw any nicer berries than I got from them this year. Thank you,
E. E. DAY.

Key, Ohio, April 22, 1920.
Dear Sirs:—Received plants the 22nd; they are the nicest plants I ever bought, and were in fine shape.
Yours truly,
CHRIS REIFF.

Grand Chain, Ill., April 20th, 1920.
Gentlemen:—The Blackberry plants that you shipped me April 19th arrived in due time in good condition, and we planted them yesterday. I certainly appreciate the straightforward honorable way in which you handled this transaction. I shall cheerfully recommend your firm to my friends in the future.
N. V. LEWIS.

Hanson, Ky., May 12th, 1920.
Dear Sirs:—I received my Strawberry and Raspberry plants on the 8th. They were so nice. Many thanks.
C. L. WARREN.

Price of Concord Grapes: Each, 25 cts.; doz., \$2.80; 25, \$5.00; 50, \$9.00; 100, \$17.00; 500, \$65.00; 1,000, \$125.00.

Cumberland Black Raspberry. This picture gives you just a faint idea of its size and beauty.

There Is No Black Raspberry Grown Equal to CUMBERLAND

Cumberland black raspberry plants as we grow them on our ideal soil can not be beat, if equalled and as we have been sold out on them every year, and have been compelled to send money back, so much and so often, we have made an extra effort to get enough grown to meet all demands that may be made on us for them this year. And as the weather was very favorable at the time tips were laid down we have the best and the largest stock of them we ever had. Now don't be afraid to plant while you have the opportunity. The season may never be as good as the past has been for growing Black Raspberry Tips. Cumberland will bring you more Quarts and Dollars than any other variety you can plant.

Price of Cumberland Raspberry: Per 25, \$1.00; 50, \$1.45; 100, \$2.50; 500, \$9.50; 1,000, \$18.50.
